**Progeny Dental is the fastest growing dental x-ray company in the U.S.**

**BUFFALO GROVE, IL**—Progeny Dental is the fastest growing dental x-ray company in the United States according to a recent trade association market share report. Since its market launch only two years ago, Progeny's flagship product, the JB-70 Intraoral X-ray System, has become the fourth best selling x-ray unit in the U.S. with unit sales that have more than doubled over the last 12 months.

Progeny vice president of sales and marketing, John MacLennan, indicated that the company is extremely proud of its achievements. He attributes the phenomenal growth to attention to quality details and customer focused design. "The JB-70 was designed to provide flawless, efficient operation for dental professionals and simple, no-hassle installation and service for our dealers," he explained. "Our focus is to provide the highest quality, easiest to use products, and the JB-70 has more than met these goals."

In addition to its growth in intraoral x-ray, Progeny's intraoral cameras are also expanding with sales tripling in the past 12 months, according to the same association study. The cameras, Micro and MicroPlus, also achieved the Realty's Choice 5-Star Award in 2003 and 2004.
