Progeny Dental ships milestone 5,000th JB-70 X-ray

Buffalo Grove, IL, May 19, 2005--Progeny Dental today announced today that its 5,000th JB-70 intraoral x-ray system has been shipped from its headquarters in Buffalo Grove, Illinois.

Less than 3 years ago, Progeny Dental shipped its first intraoral x-ray product, the JB-70, and started a quiet revolution. In just months, the highly reliable and well-designed system achieved such strong acceptance among dental professionals that it is now the fastest growing intraoral x-ray in the US.

The JB-70 meets specific professional requirements for quality images, simple and efficient operation and design aesthetics. The system can be used with standard speed film, fast film and has been optimized for use with digital sensors. In addition, its simplified installation procedure has made it a favorite of technical support personnel and clinicians alike as it minimizes installation times allowing the practice to resume operation quickly.

The milestone 5000th unit was shipped from the Progeny plant with a special coupon inside the carton commemorating the event. The eventual owner of the milestone JB-70 system will be able to redeem the coupon for \$100.
